

Table 1: Dynamic-fidelity metrics by model and horizon. Variance retention = $\text{Var}(\hat{y})/\text{Var}(y)$; temporal variability = $|\overline{\Delta\hat{y}}|/|\overline{\Delta y}|$; amplitude ratio = $\text{IQR}_{95-5}(\hat{y})/\text{IQR}_{95-5}(y)$; event amplitude retention = $\hat{y}[y > p_{75}]/y[y > p_{75}]$. Source: `pub_table_2_dynamic_fidelity.csv`, experimental commit 95c9cbd.

Model	Horizon (h)	Var. retention	Temp. variability	Amplitude ratio	Event amp. retention
LightGBM	1	0.689	0.696	0.824	0.859
LightGBM	6	0.551	0.456	0.711	0.773
LightGBM	24	0.599	0.495	0.791	0.720
LightGBM	48	0.866	0.386	1.160	0.666
SARIMA	1	0.798	0.764	0.899	0.898
SARIMA	6	0.357	0.503	0.598	0.714
SARIMA	24	0.029	0.153	0.173	0.544
SARIMA	48	0.004	0.022	0.063	0.507
